MANAGEMENT PHILOSOPHY

Dorval Global Convictions is a flexible fund that can steer exposure to the equity and/or fixed-income markets across all geographical areas. The fund's asset allocation can vary depending on our portfolio managers' economic and financial projections. The fund aims to lock in world growth via buoyant themes depending on the economic cycle.

The fund aims to take advantage of gains on the international equity and fixed-income markets and provide returns (net of fees) ahead of the benchmark, which consists of 50% EONIA Capitalisation Index 7 D and 50% MSCI international equities (MSCI World NR (EUR)) net dividends reinvested since 1 January 2013, over a 5-year investment timeframe.

RISK AND REWARD PROFILE

The risk-return scale (profile) is an indicator with a score from 1 to 7. It corresponds to an increasing level of risk and return. It is the result of a regulatory methodology based on annualised volatility, calculated over 5 years. Checked on a periodic basis, the indicator can vary.

PERFORMANCE

	1Mth	3Mths	6Mths	YTD	1Yr	3Yrs	5Yrs	Since 15/12/2008

MONTHLY COMMENTARY

The international equity markets ended July close to all-time highs, buoyed by the prospect of an easing in US monetary policy, and the likelihood that other major banks will follow suit. Trade tension and other recessionary forces currently affecting the world economy had primarily dented the manufacturing sector so far, while the non-manufacturing sector holds up well. Fed Chairman Jerome Powell referred to the US economy's favourable baseline outlook – also confirmed by the July labour market report – with no prominent risks, and propped up by strong consumer spending. So against this backdrop, Donald Trump's announcement on August 1 of a fresh round of 10% border tariffs on \$300bn in imported Chinese goods raises some questions. Products on this new list are primarily consumer goods, including \$45bn in smartphones, \$40bn in computers and \$30bn in clothing. This slew of measures will therefore dent consumer spending, but other factors can offset this: the world industrial slowdown helps keep oil prices reasonable, while the Fed's rate cut moves have a fair chance of continuing, and the recent budget agreement struck between Donald Trump and Congress helped wipe out the risk of fiscal tightening next year. So a certain balance between negative and positive influences still seems to be at work for now. Donald Trump's surprise decision is bad news for investors, although it is a less radical shift than the measures announced in May when the President abruptly escalated tariff tit-for-tat moves at a time when everyone expected a trade agreement. However, in our portfolios we have decided to increase the extent of hedging and also maintain a cautious stance in terms of exposure, diversification and themes with a defensive slant.

RISK ANALYSIS

Ratio	1 Yr	3 Yrs	5 Yrs
Alpha	-0.09	-0.04	-0.05
Beta	0.51	0.57	0.86
Sharpe Ratio	-0.41	0.20	0.31
Tracking Error	4.98	3.96	4.06
Information Ratio	-1.37	-1.16	-0.85
Volatility DGC Share R	4.3	4.2	6.0
Volatility Benchmark	6.0	5.3	6.7

Ratio	Value	
Max performance	67.7%	from 10/03/09 to 29/01/18
Max drawdown	-16.9%	from 13/04/15 to 12/02/16
Recovery period	692	Days
Profitable months	62.5%	monthly

MONTHLY EXPOSURE SINCE INCEPTION

(*) Past performance is not a reliable indicator of future performance. Performance calculation takes into account net dividend re-invested for the fund and net dividend re-invested for the benchmark since 1st January 2013.

LEGAL INFORMATION

All data relating to the fund are obtained from the book inventory and data relating to the indices and the characteristics of securities held in the portfolio are obtained from Bloomberg. The figures indicated relate to previous years. Past performance is not a reliable indicator of future performance. Investors are reminded that the composition of the portfolio may differ considerably from that of its benchmark index. As the management style is discretionary, the portfolio will never seek to reproduce the composition of the benchmark index either on a geographical or sector level. The benchmark index is therefore simply an a posteriori performance indicator. The risks and costs relating to investment in UCITS are described in the relevant prospectus. The prospectus and periodic reports are available on request from Dorval Asset Management. The prospectus must be provided to investors prior to subscription. The definition of risk indicators mentioned in this document may be found on the website: www.dorval-am.com. Prior to any investment, it should be verified that the investor is legally authorised to invest in a UCITS. The UCITS is not authorised for distribution in jurisdictions other than the countries in which it is registered. Performance data does not take into account fees and commissions received in respect of the issue and redemption of units or tax costs imposed by the client's country of residence. If a UCITS is subject to a specific tax regime, it should be noted that this regime depends on the individual situation of each client and may be liable to change. This document is intended for professional and non-professional clients. It may not be used for any purpose other than that for which it was designed and may not be reproduced, distributed or transmitted to third parties, either in whole or in part, without the prior written authorisation of Dorval Asset Management. The information contained in this document may not be deemed to have any contractual value whatsoever. Dorval Asset Management may not be held responsible for any decision taken on the basis of information contained in this document. Dorval Asset Management, société anonyme (public limited company) with share capital of EUR 303,025 registered in the Paris trade and companies register under number B 391 392 768 - APE 6630 Z, AMF approval no. GP 93-08

Definitions

Alpha:	A fund's outperformance compared with its benchmark, expressed as a percentage. This is an indicator of the manager's ability to create value, by excluding the market effect. Therefore, the higher the alpha, the better the fund's performance compared with that of its benchmark.
Beta:	Measure of a fund's sensitivity to market movements (represented by its benchmark). A beta higher than 1 indicates that the fund amplifies the trends of its reference market on the upside as well as on the downside. Conversely, a beta lower than 1 means that the fund tends to react less to movements in its reference market.
Sharpe ratio:	Indicator of a product's outperformance relative to a risk-free interest rate, given the risk taken (the product's volatility). The higher it is, the better the fund.
Volatility:	Magnitude of the variation of a security, a fund, a market or of an index over a given period. A high volatility means that the price of the security varies significantly, and therefore that the security's associated risk is high.
Maximum performance:	Maximum gain historically recorded by the fund.
Maximum drawdown:	Maximum loss historically recorded by the fund.
Recovery period:	Time expressed in number of days the fund takes to exceed the highest net asset value over the indicated period.
Gain frequency:	Calculation over the fund's history since its creation representing the ratio of the number of positive observations to the total number of observation in the period.
Exposure as a percentage:	The fund's overall exposure takes into account the sum of the physical and off-balance sheet positions. As opposed to positions called of net assets: "physical"(those booked in the portfolio's inventory of assets), off-balance sheet positions include those taken in forward financial instruments, such as derivatives. Examples of derivatives: futures contracts, swaps, option contracts. A maximum limit to off-balance sheet exposure is stated in the prospectus.

Morningstar methodology

The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; (3) is not warranted to be accurate, complete or timely.

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information.

Past performance is no guarantee of future results. References to rankings, awards and/or ratings are not an indicator of future performance by the fund or the fund manager.

The Morningstar rating applies to funds with a history of at least three years. It takes into account subscription fees, the risk-free return and the fund's volatility in order to calculate the MRAR (Morningstar Risk Adjust Return) ratio for each fund. The funds are then ranked by decreasing order of MRAR: the first 10% receive 5 stars, the next 22.5% 4 stars, the next 35% 3 stars, the next 22.5% 2 stars, and the last 10% receive 1 star. The funds are ranked within 180 European categories.
